3M Science.
Applied to Life.™

When it comes to hearing conservation programs, there is no one-size-fits-all.

Understanding the hearing protection challenge requires accurate sound detection. Delivering the right solution demands the right protection for the job. Verifying solutions calls for a validation system.

We deliver a complete set of tools needed to detect, protect and validate. It's 3M™ hearing protection solutions made innovatively easy.

The challenge of hearing protection.

Millions of workers are exposed to hearing hazards every year, and even though OSHA regulations and NIOSH recommendations in the U.S. require protection, occupational hearing loss is still the number one reported worker illness in manufacturing.

You can advance your hearing conservation program with a customized and comprehensive approach to the hearing protection challenge. Implementing a solution that really makes a difference begins with an understanding of the hazards, the regulations, and the factors that impact protection.

The Facts

37 Million Americans Experience Hearing Loss: According to the National Institutes of Health, 37.5 million (15%) Americans age 18 and older report some degree of hearing loss, and it is estimated that 26 million Americans between the ages of 20 and 69 have a hearing loss due to noise exposure.

The #1 Reported Manufacturing Health Issue: The Bureau of Labor Statistics (BLS) has reported that for people working in the Manufacturing Sector, occupational hearing loss is the most commonly recorded occupational health issue. Since 2004, nearly 258,500 workers have suffered significant, permanent hearing loss.

The Hazards

Workplace Noise: The National Institute for Occupational Safety and Health (NIOSH) estimates that almost 22 million American workers each year are exposed to occupational noises that pose a hazard to their hearing.

The Regulations

OSHA Limits: OSHA's permissible exposure limit is 90 decibels (dBA) – time-weighted average (TWA) over eight hours – for workers with no previous work-related hearing loss.

OSHA Requirements: According to OSHA, workers exposed above 90 dB(A) 8 hour time weighted average must wear hearing protection.

Employers who have workers in areas with 8 hour TWA noise exposures of 85 dBA and higher must provide an OSHA Hearing Conservation Program that includes:

1. Noise Monitoring
2. Engineering and Administrative Controls
3. Annual Hearing Testing
4. Providing Hearing Protectors
5. Annual Training
6. Record Keeping
7. Evaluate program for effectiveness

Measure, Control, Protect, Check, Train, Record, Evaluate.

Repeated exposure to loud sounds, greater than 85 dBA, can cause permanent hearing loss and tinnitus. Other health effects related to noise can include stress, anxiety, hypertension, sleep disturbance and fatigue.

Real World Concerns of Hearing Protection

Variable Noise Levels: Every environment is different, and workers can face a wide range of sound levels throughout the day and in different areas at the same facility.

The Human Factor: Each person is physically unique. The key to achieving optimal protection is selecting devices capable of providing a good fit without sacrificing comfort.

Employee Communication: Many employees need to be able to communicate easily with co-workers and listen for workplace warning sounds, while being protected from potentially hazardous noise levels.

What Types of Sounds Require Hearing Protection?

At home and work, it's important to understand which sounds may cause hearing loss and require hearing protection:

* Information from 3M™ Noise Navigator™ Sound Level Database www.3M.com/hearing and National Institute for Occupational Safety and Health (NIOSH) www.cdc.gov/niosh/topics/noise/noisemeter.html

The Solution

3M™ Detection, Protection and Validation

3M™ delivers easy and comprehensive tools to help employers solve complex hearing protection challenges.

3M's broad range of hearing protection devices in a variety of styles and materials helps you solve many of the challenges facing workers in various environments.

Accurate Noise Detection.

The first step in solving the hearing protection challenge is to measure the noise levels facing your workers. 3M™ Detection Solutions make it easy to measure noise hazards, so you can select the appropriate hearing protection for the application. Our detection instruments deliver accurate and reliable measurements, and 3M™ Detection Management Software makes it easy to report and share data.

Complying with regulations, selecting appropriate hearing protection and analyzing noise control options are all easier with 3M™ Detection Solutions for exposure assessment, noise analysis and employee engagement. 3M's accurate, reliable, and flexible instrumentation coupled with powerful software is the innovative solution for your noise measurement challenge.

Effective Hearing Protection.

Once you have completed the first step, detecting and monitoring employee noise exposures, it is critical to select hearing protectors that your employees are motivated to wear. 3M has a broad selection of hearing protectors for a wide range of environments. Trouble fitting your earplugs? Need to communicate in noise? Dirty hands? Hot, humid conditions? These are just a few of the many challenges that 3M's innovative products can help you solve. 3M global hearing team is available for consultation on your specific hearing protection challenge.

Fit Test Validation.

You have offered hearing protection to your workers. Now, how do you gain confidence each one is receiving the hearing protection intended? The 3M™ E-A-Rfit™ Dual-Ear Validation System makes it easier to validate, train and motivate workers and to assess and manage the long-term performance of your hearing conservation program.

The E-A-Rfit™ Dual-Ear validation system utilizes F-MIRE technology to measure and obtain an objective, quantitative level of employee hearing protection in less than 5 seconds per ear. Workers receive their own personal attenuation rating (PAR) and learn how correctly using their hearing protection can increase their level of protection. Integrating hearing protector fit testing into your hearing conversation program benefits everyone from new hires to high-risk workers.

Confirming the Right Fit with the 3M™ E-A-Rfit™ Dual-Ear Validation System

Get results you can trust. The 3M™ E-A-Rfit™ Dual-Ear Validation System measures the effectiveness of earplugs and earmuffs from inside the employee's ear, providing accurate, quantitative results. And because you can simultaneously test both ears, you'll have more time to educate employees on the importance of fit and compliance.

An Integral Part of Your Hearing Protection Program

Integrating hearing protector fit testing into your hearing conservation program benefits everyone from new hires to high-risk workers.

The 3M™ E-A-Rfit™ Dual-Ear Validation System

As the leader in hearing protection, 3M™ offers a complete solution, with dual-earplug and earmuff testing capabilities plus a user-friendly interface. The 3M™ E-A-Rfit™ Dual-Ear Validation System is the fast and easy way to find your employees' Personal Attenuation Rating (PAR), because we know how important it is to make your hearing conservation program fit seamlessly into your operation.

Features

- ▶ Dual-ear testing
- ▶ Fast, clear accurate results
- ▶ Earplug and Earmuff testing capability
- ▶ Tests all 7 frequencies
- ▶ Seamless software integration
- ▶ Science-based, quantitative testing
- ▶ Compact design

Technology and Support from the 3M™ Hearing Protection Specialists

Employee Education and Training.

The 3M global hearing team provide valuable on-site training and seminars throughout North America, helping employers and their workers achieve their hearing conservation goals. 3M's training program for employees is designed to meet the requirements in OSHA 1910.95 for annual hearing conservation training and is conveniently performed on-site at no cost. Whether it's explaining attenuation ratings or regulations, or helping to provide the motivation workers need to comply, 3M certified trainers are available to help you achieve your hearing conservation program objectives. They will work with your team to help you ensure your workers are protected with the right hearing protection equipment for their jobs.

Understanding Noise Reduction Rating (NRR).

A noise reduction rating is determined based on how well the hearing protector performed in a laboratory under ideal conditions. However, each hearing protector's NRR is not really a good estimate for workplace noise reduction. Many factors, such as the relationship between the size of the wearer and size of the hearing protector, and how it has been inserted or fitted, can impact how effective that hearing

protector will be. That's why it is so important to have the 3M™ E-A-Rfit™ Dual-Ear Validation System as part of your hearing conservation program and the support of a hearing protection team with over 40 years of experience.

Innovation from the Experts.

At 3M, we understand the challenges of the workplace, the complexities of selecting and using protection devices, and the importance of creating adaptable solutions for hearing protection. Our innovations in noise detection, protection and validation are designed to help solve real-world challenges, providing our customers with the advanced and comprehensive solutions needed to help them protect workers.

The 3M team of application specialists, sound engineers, and support personnel provides an unmatched level of support you can rely on to advance your hearing protection program.

Food Industry Worker

“In my job, I don’t want complicated hearing protection. Just keep it simple.”

Susan works indoors at a food processing plant in a damp, refrigerated area. She leaves her hearing protectors in throughout her entire shift.

She needs metal detectable earplugs or easy-to-clean earmuffs. And they have to be comfortable.

Construction Supervisor

“I need to be able to hear my co-workers communicate with me, and ensure they are protected.”

John moves in and out of noisy areas continuously throughout the day. Most of the time he is on the phone or a two-way radio.

He needs a hearing protection solution with wireless 2-way radio communications and level-dependent technology. John also needs detection equipment to measure personal noise exposure and area sound pressure levels. In short, John needs to hear, communicate and measure sound levels in noisy environments.

Iron Worker

“I don’t like boring products. Give me some interesting choices for my hearing protection.”

Bill works in hot and humid environments, and often in tight spaces. He’s constantly moving and takes his earplugs out frequently.

He needs large-sized earplugs that don’t have to be rolled down before inserting. If he’s also wearing earmuffs, they need to fit within his welding helmet.

Machine Operator

“My hearing protection has got to be comfortable. That’s my top priority.”

Julia works at the same station every day and wears safety glasses throughout her entire shift.

She needs small-sized earplugs or earmuffs that are comfortable for extended wear.

Detection Solutions

Noise measurement is the first step in identifying where hearing protection may be needed. 3M™ delivers innovative detection solutions for effective noise monitoring programs. Durable, accurate, and easy-to-use instrumentation makes it simple to report and share noise exposure data. 3M™ Detection products deliver brilliantly intuitive solutions to complex monitoring challenges.

3M Science.
Applied to Life.™

3M™ Noise Indicator NI-100

The 3M™ Noise Indicator NI-100 alerts the wearer to potentially dangerous noise levels, helping identify areas where hearing protection may be needed. Users clip the noise indicator to a shirt or jacket, and its LED light provides a clear indication when noise levels exceed a potentially hazardous threshold. The NI-100's small size and lightweight design make it a great option for workers in a variety of industries.

- ▶ Affordable lightweight noise monitor with a durable, easy-to-use design
- ▶ Rechargeable battery that operates for up to 200 hours between charges
- ▶ Flashing green LED indicates if noise level is below 85 dBA
- ▶ Flashing red LED indicates noise level is at or above 85 dBA, indicating hearing protection may be needed

Product #	UPC #	Abbreviated Description	Case Qty
NI-100	00051131 17453 5	Noise Indicator	10 EA
053-575	00051131 48767 3	USB Cable Accessory for Battery Charging	1 EA

3M™ Sound Detector SD-200

The 3M™ Sound Detector SD-200 is a compact, lightweight sound level meter designed for measurement of workplace noise levels. Its intuitive design makes it easy for users to measure sound levels and helps determine the attenuation of hearing protection that may be required. The integrating feature computes the average sound pressure level, allowing for more accurate assessment of intermittent sound levels.

- ▶ Simple, user-friendly interface; green, yellow and/or red LEDs flash when preset noise levels are reached
- ▶ A rechargeable lithium polymer battery operates up to 50 hours between charges
- ▶ Large, easy-to-read display of average sound level where noise is highly variable
- ▶ Features a Class/Type 2 microphone
- ▶ Measures Sound Pressure Level (SPL), Average value (LEQ/LAVG), LED alert, Maximum value (MAX), Minimum value (MIN), Run-Time, Overload (OL) and Under-Range (UR)
- ▶ Display range is 40 to 130 dB (Dynamic Range)

3M™ Sound Examiner SE-400 Series

The 3M™ Sound Examiner SE-400 series of sound meters is engineered to accurately measure noise levels in highly variable environments. These advanced instruments compute the average sound pressure level (LEQ/LAVG) over the run time and feature user-selectable data logging intervals, helping you to more accurately assess occupational and environmental noise levels.

- ▶ Intuitive interface allows for out-of-box use with little training
- ▶ Intrinsically Safe models available
- ▶ User selectable data logging intervals for download and analysis with 3M™ Detection Management Software
- ▶ Averaging functionality allows for easy measurement in variable environments
- ▶ Choose from models with Class/Type 1 or Class/Type 2 microphones
- ▶ SE-401 and SE-402-R models include removable preamp for environmental noise applications

Product #	UPC #	Abbreviated Description	Case Qty
SE-401	00051131498686	SE-401 Sound Examiner, Type 1 Microphone, Removable preamp	1 EA

3M™ Edge™ Dosimeters

The 3M™ Edge™ Dosimeter is a personal noise dosimeter series offers advanced technology packaged in an intrinsically safe, cable-free, compact frame for a lighter, more ergonomic way to monitor noise exposures.

- ▶ Comfortable, compact 3-ounce (85 grams) unit mounts easily to the shoulder
- ▶ Large display with intuitive easy-to-use interface provides crucial information at a glance
- ▶ Edge 5 model offers three independent dosimeters that can simultaneously measure against separate industry standards, all in one compact unit
- ▶ LCD display with visual warnings and option to lock out screen
- ▶ MSHA, SIRA (ATEX), CSA (U.S./Canada) and Simtars (IECEX) Intrinsic Safety Approvals

Product #	UPC #	Abbreviated Description	Case Qty
eg5-D	00051131485303	Edge™ 5 Noise Dosimeter with Single Edge Dock	1 EA
eg4-D	00051131485266	Edge™ 4 Noise Dosimeter with Single Edge Dock	1 EA
5eg5-D-AC3	00051141562483	5-Pack Edge™ 5 Noise Dosimeter and AC-300 Calibrator	1 Kt/Case
5eg4-D-AC3	00051141562452	5-Pack Edge™ 4 Noise Dosimeter and AC-300 Calibrator	1 Kt/Case

3M™ AcustiCal AC-300 Calibrator

The 3M™ AcustiCal AC-300 Calibrator was specifically designed for easy field calibration of 3M™ sound level meters and noise dosimeters across a wide range of temperature, humidity and pressure conditions. Simply insert the microphone of your instrument into the calibrator, select the correct signal from the onebutton keypad and calibrate.

- ▶ Type 1 calibrator for use with 3M™ Sound Level Meters and Noise Dosimeters
- ▶ Produces two signals: 250 Hz or 1,000 Hz at a sound pressure level of 114 dB
- ▶ Fast, simple operation for calibrating in the field
- ▶ Conforms to sound calibrator requirements of IEC 60942 (2003-01) and ANSI S1.40-2006 (R2011)

Product #	UPC #	Abbreviated Description	Case Qty
AC-300	00051131499140	AcustiCal AC-300 Calibrator	1 EA

3M™ Detection Management Software (DMS)

Once you've detected the level of noise exposure, 3M's DMS Detection Management Software allows you to centrally organize and access the information through our user-friendly software. It's data management made easy.

DMS works with 3M™ Detection Solutions Data Logging Instruments to allow for recording, reporting, charting and analyzing exposures to a variety of occupational and environmental hazards. Easy to learn with icon-driven navigation, DMS provides a simplified user experience and a powerful, consistent software platform across multiple sites.

Disposable Earplugs

3M™ Disposable Earplugs, made from expandable slow-recovery foam, help provide a great combination of comfort and hearing protection for users. Once in the ear, foam earplugs expand to conform to the unique shape of each ear canal. 3M provides a wide range of disposable roll-down earplugs so you can choose the best solution for your individual needs.

3M™ E-A-R™ Classic™ Earplugs

Classic earplugs were the industry's first foam earplugs, virtually revolutionizing hearing protection. Today, the revolution continues. Classic earplugs meet wearer and environmental needs with its proprietary foams, preferred cylindrical shape and proven in-ear comfort.

- Available with Cord
- Moisture Resistant
- Slow-Recovery Foam
- E-A-Rfit Testable
- NRR 29 dB*

Push-to-Fit Earplugs

Simply hold 3M™ Push-to-Fit Earplugs by the stem then push them into place — there is no roll-down required. The soft foam tip quickly adjusts to the shape of the ear to help create a noise-reducing seal. Since you don't touch the foam tip, they are easy to insert and keep clean, even when your hands are dirty or you are wearing gloves.

3M™ E-A-R™ Push-Ins™ Earplugs

No roll-down is required with these earplugs. A gentle push is all it takes for easy, consistent insertion. Blue stem makes insertion and removal easy and helps keep the tips clean when the wearer's hands are dirty. The unique, soft 3M™ E-A-Rform™ Foam Tip is shaped and sized to mold comfortably for most ears.

3M™ Pistonz™ Earplugs

These earplug tips look like metal, but feel ultra-soft. They are made of a specially formulated foam that is so soft and comfortable the earplugs can be worn all day long. The cylindrical shape is designed for most size ears. The stem is stiff enough to insert yet is designed to flex sideways if impacted during wear. No need to roll foam tips before inserting. Just grip the stem and insert tip into the ear — right out of the package.

Banded Hearing Protectors

Banded hearing protectors are an easy-to-use, convenient alternative to earplugs and earmuffs. They are quick to put on and take off and may be stored around the neck in between uses, making them excellent for intermittent use. Banded hearing protectors offer simplicity to help ensure your workers are receiving the right level of protection. Most models are available with replacement tips, which make them a very cost-effective option.

3M™ E-A-Rflex™ Hearing Protectors

A comfortable, effective, lightweight alternative to earmuffs; helps provide excellent noise reduction. Great for people who fit and remove their hearing protection frequently. Soft tips pivot to help maintain a comfortable, noise-blocking seal. Band may be worn in multiple positions.

Reusable

3M | **PELTOR™**

3M™ PELTOR™ Earmuffs - X Series

The 3M™ PELTOR™ Earmuffs - X Series are available in headband and hard hat attached versions. With Noise Reduction Rating (NRR) values ranging from 21 to 31 dB, the X Series makes it easier than ever to match the attenuation of the earmuff with the noise exposure of the worker. When correctly selected and worn, these products help reduce exposure to hazardous levels of noise and loud sounds. The hard hat attached models are designed to fit securely into standard accessory slots, such as those on the 3M™ H700 Series hard hats.

Rugged headbands and attachment arms help maintain comfortable pressure all day

Twin headband design helps lessen heat build up on top of head

Easily adjustable plastic guides help move the cup position comfortably while the earmuff is on the head

Soft outer cup coating helps protect from abrasion and bumps

Durable, long-lasting ABS plastic cups with soft overmolding are designed to perform even in tough work conditions

Modern, sleek design helps promote users to wear them

Electrically insulated headband** with no exposed wires helps protect from low voltage electrical hazards

Flat, wide headband with soft plastic coating helps provide stable pressure on top of the head for enhanced comfort

Large space inside ear cups allows for a comfortable fit over a wide range of ear sizes

Wide, soft foam ear cushions designed for high comfort and an effective seal with the head

E-A-Rfit Testable

Earmuffs

Earmuffs are a popular choice in hearing protection due to their ease of use and consistent fit. Available in headband, neckband, hard hat attached and folding models, earmuffs help meet hearing protection needs in many common applications.

* See important warning on fit testing and NRR derating on last page

** Electrically Insulated. Non-conductive (sometimes referred to as "dielectric") material covers the metal components of the helmet attachment and headband mechanisms. These earmuffs have been evaluated at an external laboratory against a modified test method based on EN 397:2012 under dry conditions. The metal parts of the headband and hard hat attachment are electrically insulated withstanding a voltage up to 1.2 kV. The user must determine the overall suitability of this product for the intended application taking into account any hazards other than noise for which this product is tested and approved.

3M™ PELTOR™ Earmuffs X1-X3

New & Improved 3M™ PELTOR™ Earmuffs — Now with electrically-insulated models in hard hat attached and over-the-head styles to meet the needs of an extensive range of industrial applications.

3M™ PELTOR™ Earmuffs X4

The X4 combines high attenuation with a sleek, low-profile and lightweight design. The innovative foam earcup inserts and spacers help boost attenuation while adding little bulk or weight.

- ▶ Lighter and smaller cup profile than the X3 with nearly the same level of attenuation
- ▶ Electrically-insulated models available in over-the-head and hard hat-attached styles
- ▶ High level of protection without all the bulk
- ▶ Innovative foams and proprietary high density, slow recovery 3M™ E-A-R™ foam ear cushion helps create high levels of comfort and attenuation
- ▶ Bright yellow-green color cups help employers verify hearing protectors are being worn

3M™ PELTOR™ Earmuffs X5

For very high noise situations, no earmuffs in the market today offer a higher Noise Reduction Rating (NRR) than X5. The high attenuation provided by these earmuffs is a result of the combination of specially-formulated foam in the earcups and cushions and the innovative spacer and cup design.

- ▶ High attenuation, NRR 31 dB* in both headband and hard hat-attached models
- ▶ Electrically-insulated models available in over-the-head and hard hat attached styles
- ▶ Twin headband design helps reduce heat buildup with good fit and balance
- ▶ Combination of new technologies allows for more room inside the earcup, helping provide a more comfortable fit over a wide range of ear sizes

3M™ E-A-R™ Earmuff Model 3000

This earmuff combines excellent attenuation with comfortable durability. It helps provide a protective seal without excess pressure. Pivoting earcup connections help maintain the seal and proper alignment.

- ▶ Headband may be worn over the head, behind the head, or under the chin
- ▶ Noise Reduction Rating NRR 25 dB* when the band is worn over the head; NRR 26 dB* when the band is worn under the chin; NRR 26 dB* when band is worn behind the head

Smart Communication Solutions

3M™ PELTOR™ Products have a broad selection of communication solutions with a variety of hearing protectors for work groups operating in high-noise environments. 3M™ PELTOR™ Communication Headsets are designed to help you hear and communicate effectively while reducing potentially hazardous noise.

3M | **PELTOR™**

3M™ PELTOR™ Tactical Earplug, TEP-100

The 3M™ PELTOR™ Tactical Earplug helps protect your hearing, helps improve situational awareness, and helps improve communications in challenging environments. Integrated with state-of-the-art level dependent technology the TEP-100 earplug helps provide hearing protection in elevated sound pressure level applications and situational awareness in quiet environments.

- ▶ Earplugs recharge while in the case and provide up to 16 hours of continuous operation
- ▶ Intuitive one button operation turns unit on, off, and selects between two amplification settings
- ▶ Replaceable communications eartip helps provide hearing protection in noisy environments
- ▶ Microphone port is covered and flush to help minimize wind noise disturbances

3M™ PELTOR™ E-A-Rbud™ Headphones

Combining hearing protection with clear sound reproduction, 3M™ PELTOR™ E-A-Rbud™ Headphones allows users to listen to a wide variety of audio devices while reducing potentially harmful external noise. When employees have their favorite sounds at their fingertips, they're more likely to wear hearing protection.

- ▶ MP3 player compatible (devices with a 3.5mm stereo audio jack - smartphone, iPod®, iPad®, etc.)
- ▶ Audio muting option lets you shut off the sound at a touch
- ▶ Two styles of eartips included
- ▶ Output audio limited to a maximum sound pressure level (SPL) of 82 dBA

3M™ PELTOR™ WorkTunes™ Pro AM/FM Radio Headset

The new WorkTunes™ Pro Headset makes it easy to stay protected and productive with your favorite music, audiobook or podcast. Designed by 3M™ PELTOR™ for rugged work environments, the WorkTunes™ Pro Headset combines professional-grade durability with lightweight comfort for all-day wearability.

- ▶ Available in both headband and hard hat-attached configurations
- ▶ Rugged, dual-shell design helps protect electronics from moisture
- ▶ Lightweight design
- ▶ User-friendly controls eliminate dials
- ▶ Connect smart phone, radio, shoulder mic or other external device (listen-only) with 3.5 mm stereo input
- ▶ Stainless steel wire headband offers comfortable and consistent pressure
- ▶ Integrated antenna helps protect against snags
- ▶ Full one-year product warranty
- ▶ Two AA batteries provide approximately 40 hours of continued use. Headset powers off after 4 hours of non-use to conserve batteries. Audio alert when battery is low
- ▶ Keep headset in proper working order with replacement cushions and foam liners (hygiene kit available separately)
- ▶ Noise attenuating ear cups help provide hearing protection in environments with potentially hazardous noise

- Hard Hat Attachment
- Listen Only
- Hygiene Kit

3M™ PELTOR™ Tactical 6-S/SoundTrap Headsets

The Tactical 6-S and SoundTrap headsets help provide comfortable hearing protection for users working in high-noise environments while providing environmental listening. Slim earcups are designed for extended-wear comfort and have separate microphone, receiver, amplifier and volume controls for true stereophonic sound. The small, durable and compact design folds for easy storage.

- ▶ Helps reduce exposure to hazardous sounds
- ▶ Slimline earcup design compatible with many military and law enforcement helmets
- ▶ Small, compact and foldable for easy storage
- ▶ Level dependent function for environmental listening, limited to 82 dBA

- Environmental Listening
- Neckband

3M™ PELTOR™ ProTac™ III Headset

You know that wearing hearing protection in noisy environments is important for worker safety. But it is also to be able to hear alarms, vehicles and effectively communicate with other workers. The 3M™ PELTOR™ ProTac™ III Headset utilizes level-dependent technology to block out potentially harmful noise when needed and still listen normally when not. Designed by 3M™ PELTOR™ for rugged work environments, the ProTac™ III Headset combines professional-grade durability with lightweight comfort for all-day wearability. It's everything you've grown to expect from PELTOR™ and all at an introductory price.

- ▶ Available in both headband and hard hat attached configurations
- ▶ Rugged, dual-shell design helps protect electronics from moisture
- ▶ Lightweight design
- ▶ User-friendly buttons minimize accidental adjustments that are common with dials
- ▶ Connect smart phone, radio, shoulder mic or other external device (listen-only) with 3.5 mm stereo input
- ▶ Stainless steel wire headband offers comfortable and consistent pressure
- ▶ Noise attenuating ear cups help provide hearing protection in environments with potentially hazardous noise
- ▶ Full one-year product warranty
- ▶ Two AA batteries provide approximately 100 hours of continued use. Headset powers off after 4 hours of non-use to conserve batteries. Audio alert when battery is low.
- ▶ Keep headset in proper working order with replacement cushions and foam liners (hygiene kit available separately)
- ▶ Environmental microphones for level-dependent hearing protection and ambient listening

- Environmental Listening
- Hard Hat Attachment
- Hygiene Kit

3M™ PELTOR™ ProTac™ Hunter & ProTac™ Shooter Headsets

Hearing protection and situational awareness

The 3M™ PELTOR™ ProTac™ Hunter and the ProTac™ Shooter Headsets come loaded with smart technology. By utilizing level-dependent technology, these headsets block out potentially harmful noise when needed and still allow you to listen normally when not. So you can more effectively listen and communicate with your surroundings, hunting team or range officer. Designed by 3M™ PELTOR™ for rugged hunting and shooting environments, the ProTac™ III Headset combines professional-grade durability with lightweight comfort for all-day wearability.

Features and Benefits

- ▶ Stainless steel wire headband offers comfortable and consistent pressure
- ▶ Rugged dual-shell design helps protect electronics from moisture
- ▶ Lightweight design
- ▶ User-friendly controls eliminate dials
- ▶ Connect smart phone, radio, shoulder mic or other external device (listen-only) with 3.5 mm stereo input
- ▶ Noise attenuating ear cups help provide hearing protection in environments with potentially hazardous noise
- ▶ Full one-year product warranty
- ▶ Two AA batteries provide approximately 100 hours of continued use. Headset powers off after 4 hours of non-use to conserve batteries. Audio alert when battery is low
- ▶ Keep headset in proper working order with replacement cushions and foam liners (hygiene kit available separately)
- ▶ Level-dependent microphones with 5 sound levels for ambient listening

- Environmental Listening
- Hygiene Kit

3M™ PELTOR™ Tactical Sport™ Headsets

Tactical Sport headsets help provide a natural, realistic sound, giving users the fastest shut-off and recovery time of any shooter earmuff we've ever made. Our sound amplification boosts your ability to hear low level environmental sounds, while still instantly attenuating dangerous noises, like gunfire, to lower listening levels.

- ▶ Contoured cups for better stock-weld and sight picture
- ▶ Automatic shut-off (2 hour) to conserve battery life
- ▶ Interchangeable orange cups (on the 479 version)
- ▶ Amplifies low level environmental sounds
- ▶ Digital Sound Suppression technology

- Level-Dependent Technology
- Folding Headband
- Listen Only/Lightweight
- Hygiene Kit

MT15H7P3E SV	70071523412	TacticalPRO™ Communications Headset, Hard Hat Attachment, NRR 22 dB*	1 EA

CAUTION! When worn according to the User Instructions, these hearing protectors help reduce exposure to both continuous noises, such as industrial noises and noises from vehicles and aircraft, as well as very loud impulse noises, such as gunfire. It is difficult to predict the required and/or actual hearing protection obtained during exposure to impulse noises. For gunfire, the weapon type, number of rounds fired, proper selection, fit and use of hearing protection, proper care of hearing protection, and other variables will impact performance. If your hearing seems dulled or you hear a ringing or buzzing during or after any noise exposure (including gunfire), or for any other reason you suspect a hearing problem, your hearing may be at risk. To learn more about hearing protection for impulse noise, visit www.3M.com/hearing.

3M™ PELTOR™ WS™ 100 Headsets

The new WS™ series headsets combine hearing protection with the latest in Bluetooth® wireless technology and make it easy for workers to communicate, listen to music and talk on the phone. They help improve awareness by amplifying lower volume sounds like voices, while attenuating higher volume workplace sounds. These innovative headsets offer protection and help enhance worker safety by making it easier to hear regular speech, warning signals and approaching vehicles.

- ▶ Noise-canceling electret boom microphone included
- ▶ Microphone built into front of right earcup for operational use without using the boom microphone
- ▶ Environmental listening cup microphone technology
- ▶ 2 AAA rechargeable batteries and charger included
- ▶ Input sound control and audio limiting technology to 82 dB (SPL)

- Level-Dependent Technology
- Folding Headband
- Hard Hat Attachment
- Bluetooth® Compatible
- Hygiene Kit

More Smart Communication Solutions.

Noise can create unique challenges for your workforce, and 3M™ PELTOR™ products offer innovative solutions that make it easier for your team to communicate in high-noise environments.

Our dedication to developing communication solutions began over 40 years ago. Today we offer an extensive range of personal safety headsets and 2-way radio accessories for use in manufacturing, construction, shooting, racing, law enforcement and military environments.

From our tactical hearing protectors to our self-contained 2-way radio headsets, 3M™ PELTOR™ products deliver the quality and performance needed for clear communication in high noise environments. Our products incorporate the latest technological advances in electronics, materials and design.

3M™ PELTOR™: Innovative products. Clear communication. Professional comfort.

Fit Testing Made Easy

3M™ E-A-Rfit™ Dual-Ear Validation System utilizes F-MIRE technology to measure and obtain an objective, quantitative level of employee hearing protection in just 5 seconds per ear. Workers receive their own personal attenuation rating (PAR) and learn how correctly inserting earplugs can increase their level of protection.

E-A-Rfit™

3M™ E-A-Rfit™ Dual-Ear Validation System

Get results you can trust. The E-A-Rfit™ Dual-Ear Validation System measures the effectiveness of the hearing protection from inside the employee's ear, providing accurate, quantitative results. And because you can simultaneously test both ears, you'll have more time to educate employees on the importance of fit and compliance.

① Fit.

Have the employee insert their earplugs or put on their earmuffs.

② Test.

Connect to microphones and begin speaker test sound.

③ Assess.

Use PAR to customize hearing protector selection.

The challenge of hearing protection.

How do you know if your workforce is protected?

Protecting workers from hazardous noise levels is an ongoing challenge for many organizations. In fact, according to the U.S. Bureau of Labor Statistics (2014), the most commonly recorded occupational illness in the manufacturing sector is permanent hearing loss. The success of your safety program depends on many factors and requires more than just offering hearing protection.

Individual Fit Testing Using F-MIRE

Using F-MIRE (Field Microphone-In-Real-Ear) technology, the E-A-Rfit™ Dual-Ear Validation System generates a Personal Attenuation Rating (PAR) less than 5 seconds for both ears, taking into account the seven standard measured testing frequencies.

- ▶ Measures how well 3M's most popular earplugs, earmuffs and communications headsets perform
- ▶ Delivers a quantitative measurement of personal noise reduction for each employee
- ▶ Can help identify whether or not the employee has adequate protection

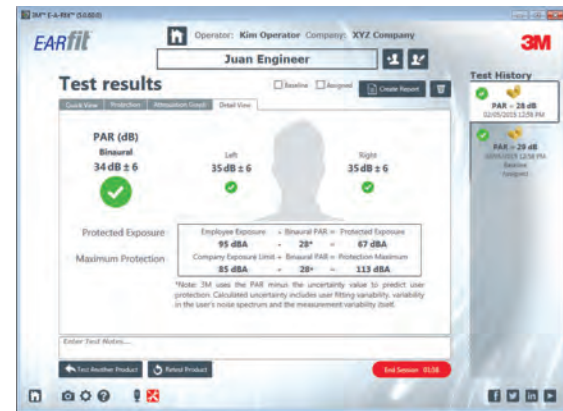

3M™ E-A-Rfit™ Dual-Ear Validation System

Employee-to-Employee Variability

To make sure they are getting the protection they need, you need to know the Personal Attenuation Rating (PAR) of every employee. The highest-NRR earplug or earmuff won't provide the expected protection if it doesn't fit right or isn't used right. Once you know each employee's number, you'll be on the way to yours: 100% confidence in your hearing conservation program.

Every employee is different. Every job is different. Every ear is different. Finding each employee's number will help you validate compliance and have assurance that their hearing protection is sufficient.

Program Documentation

E-A-Rfit Dual-Ear Validation System testing sessions produce a validation document that can be kept in each employee's file, providing documentation of your commitment to training and compliance with OSHA hearing conservation program guidelines.

- ▶ Features easy-to-read test results for both ears as well as testing history
- ▶ Creates digital and printable reports for both employee and company records
- ▶ Provides a direct measurement of noise reduction in decibels
- ▶ Provides an estimate of test variability

NOTE: Finding out each employee's PAR is the first step to a successful conservation program. Once a worker's PAR is measured, you can determine if they're using the right hearing protection and ensure they're trained on using it properly.

These earplug styles cover fit validation testing for more than 90 different 3M earplug and earmuff products.

10 dB
Right

Fail.

A "fail" result means the hearing protection either does not fit properly or is the wrong type or size for the worker's ear canal.

29 dB
Left

Pass.

A "pass" result means the hearing protection fits properly and provides sufficient protection for the worker's specific job.

The tools you need to help you manage a successful hearing conservation program.

3M™ Hearing Solutions

When you're committed to hearing loss prevention, your employees are more likely to share your dedication and protect their hearing. With world-class, proven detection, protection, communication and validation products, 3M™ Hearing Solutions is the partner you'll want with you every step of the way.

WARNING

Hearing Protection Products*

These hearing protectors help reduce exposure to hazardous noise and other loud sounds. Misuse or failure to wear hearing protectors at all times that you are exposed to noise may result in hearing loss or injury. For proper use, see supervisor, User Instructions, or call 3M™ PSD Technical Service in the USA at 800-243-4630. If there is any drainage from your ear or you have an ear infection, consult with your physician before wearing earplugs. Failure to do so may result in hearing loss or injury.

WARNING

Noise Reduction Rating (NRR):

* 3M strongly recommends fit testing of hearing protectors. Research suggests that many users will receive less noise reduction than indicated by the NRR due to variation in hearing protector fit, fitting skill and motivation of the user. If the NRR is used to estimate typical workplace protection, 3M recommends that the NRR be reduced by 50% or in accordance with applicable regulations.

CAUTION!

When worn according to the User Instructions, these hearing protectors help reduce exposure to both continuous noises, such as industrial noises and noises from vehicles and aircraft, as well as very loud impulse noises, such as gunfire. It is difficult to predict the required and/or actual hearing protection obtained during exposure to impulse noises. For gunfire, the weapon type, number of rounds fired, proper selection, fit and use of hearing protection, proper care of hearing protection, and other variables will impact performance. If your hearing seems dulled or you hear a ringing or buzzing during or after any noise exposure (including gunfire), or for any other reason you suspect a hearing problem, your hearing may be at risk. To learn more about hearing protection for impulse noise, visit www.3M.com/hearing.
